BRO"S QUIZ

Terminal Application Assignment

BRO"S QUIZ OVERVIEW

BASIC OVERVIEW

- A quiz that tests a user on their level of broship.

- Broship, as defined by Urban Dictionary = "The state of being 'bro's' with someone. Extreme love for a bro in an unconditional way.

- This terminal application will operate similar to lots of cheesy online quiz's that you'd see on facebook. You answer a bunch of questions and then get told your score at the end.

- This application will output your score and display a custom message based on the score

FEATURES

FEATURES INCLUDE -

- **The Quiz Itself**
- **User Answers Input & Score Tracking**
- **Highscores List**
- **Game Menu**

THE CODE

DEVELOPMENT REVIEW

PRIMARY DEVELOPMENT REVIEW ITEMS

- **Challenges:**
  The primary challenges revolved around getting the validation error handling incorporated into different sections of the quiz. Especially with the instance variable @name.

- **Ethical Issues:**
  Being a game built on satire for a young male audience, I had to ensure that none of the quiz questions or answers were too offending to females.

- **Favourite Parts:**
  Writing the original quiz questions and answers.
  Being challenged throughout the development process with errors.
  Adding Gems and styling the application to add another dimension of creativity.

THE END

CHEERS!
